COURSE ROADMAP

1. **Data Analytics Foundations & Business Intelligence** — Phase 1
   Core concepts, BI tools, data sources & the analytics method
2. **Python Programming Fundamentals** — Phase 2
   Jupyter/Colab, core Python, functions & SQLite basics
3. **Python for Data Analysis & Visualization** — Phase 3
   NumPy, Pandas, Matplotlib, Seaborn, Plotly & Streamlit
4. **Statistics, Probability & SQL for Analytics** — Phase 4
   EDA, probability, SQL, joins, window functions
5. **Power BI — Visualization & BI** — Phase 5
   Data modeling, Power Query, dashboards & publishing
6. **Advanced Excel & Tableau** — Phase 6
   Formulas, macros/VBA, end-to-end Tableau dashboards
7. **Generative AI for Data Analytics** — Phase 7
   GenAI fundamentals, NLP & prompt engineering
8. **Capstone Projects + Career Preparation** — Phase 8
   3 live analytics projects, resume & mock interviews

How each phase builds on the last

Foundations & BI give you the vocabulary to use Python; Python powers the data you query with SQL; SQL output feeds directly into the Power BI and Tableau dashboards; and GenAI layers on top so every report can be explained and automated faster. By the Capstone, every earlier skill comes together in one project.

PHASE 1 — DATA ANALYTICS FOUNDATIONS & BI

Every data analyst needs a rock-solid grip on what analytics is, where it fits in business decisions, and the data all around them.

Analytics Foundations

- ✅ Introduction to Data Analytics, its global scope & role of a Data Analyst
- ✅ Data Analytics vs Business Analytics — key differences
- ✅ The Data Analytics method — from question to insight

Business Intelligence

- ✅ What is BI and why it matters; popular BI tools & techniques
- ✅ Identifying & evaluating reliable data sources
- ✅ Types of data: structured, unstructured, qualitative & quantitative

Analytics | BI | Data Sources | KPI

What you'll be able to do after Phase 1

By the end of this phase, every student can explain the full data analytics lifecycle, choose the right BI approach for a business problem, and classify any dataset before analysis begins.

Where this shows up on the job

Every time a business asks “why did sales drop last quarter”, this is the phase that teaches you to pick the right data source, the right BI tool, and the right metric before opening any tool.

PHASE 2 — PYTHON PROGRAMMING FUNDAMENTALS

A strong Python foundation that powers every later phase — from cleaning data to building GenAI-assisted workflows.

Python Basics

- ✅ Installing & working with Jupyter Notebook and Google Colab
- ✅ Python operators, data types & built-in functions
- ✅ Lists, slicing, tuples, dictionaries, sets, def & return statements

Working With Data

- ✅ Advanced Python functions & intro to SQLite operations
- ✅ Date-time manipulation & data cleaning techniques
- ✅ Writing clean, reusable functions for analytics workflows

Python · Jupyter · Google Colab · SQLite

What you'll be able to do after Phase 2

By the end of this phase, every student can write clean, working Python code to load, clean and reshape any dataset — ready to feed into analysis and visualization tools.

Where this shows up on the job

Analysts spend a large share of their week cleaning and reshaping data before any dashboard gets built — the Python fundamentals from this phase are what make that process fast instead of painful.

PHASE 3 — PYTHON FOR DATA ANALYSIS & VISUALIZATION

Master the core data-science libraries used daily by analysts to explore, visualise and present real-world datasets.

Core Libraries

- ✅ NumPy for fast numerical computing & array operations
- ✅ Pandas — Series, DataFrames & real-world data wrangling
- ✅ Matplotlib, Seaborn & Plotly for data visualization

Applied Visualization

- ✅ Bar plots, quiver & stream plots for advanced charting
- ✅ Visualising distributions & relationships in real datasets
- ✅ Building interactive mini-apps with Streamlit

NumPy | Pandas | Seaborn | Streamlit

What you'll be able to do after Phase 3

By the end of this phase, every student can independently clean, explore and visualise any dataset in Python, and package findings into a shareable Streamlit app.

Where this shows up on the job

A quick Pandas-and-Seaborn exploration is usually the first thing an analyst does with any new dataset — before a single dashboard or report gets built.

PHASE 4 — STATISTICS, PROBABILITY & SQL FOR ANALYTICS

Develop the statistical thinking and SQL fluency every data analyst needs to query databases and validate insights.

Statistics & EDA

- ✅ Statistics & Probability fundamentals for analytics
- ✅ Exploratory Data Analysis (EDA) — techniques & workflow
- ✅ Data modelling & normalization principles

SQL for Analysts

- ✅ SQL fundamentals, MySQL interface, DDL/DML/DQL/TCL/DCL
- ✅ Joins, constraints, indexes, views & subqueries
- ✅ Aggregate, string, temporal & window functions

SQL | MySQL | Joins | Window Functions

What you'll be able to do after Phase 4

By the end of this phase, every student can write production-grade SQL queries confidently and apply statistical reasoning to validate every insight they report.

Where this shows up on the job

SQL is the single most-listed skill on Indian data analyst job postings. This phase ensures you can write a multi-table join or a window-function query live, in any interview, without hesitation.

PHASE 5 — POWER BI: VISUALIZATION & BUSINESS INTELLIGENCE

Master Microsoft Power BI end-to-end — from connecting raw data to publishing live, scheduled dashboards.

Building Dashboards

- ✅ Introduction to Power BI and the BI workflow
- ✅ Data modeling, relationships & Power Query Editor
- ✅ Data visualization principles — choosing the right chart

Reports & Publishing

- ✅ Building dashboards with animated & custom visuals
- ✅ Creating multi-page interactive reports
- ✅ Publishing, sharing & scheduling automatic refreshes

Power BI | Power Query | DAX | Dashboards

What you'll be able to do after Phase 5

By the end of this phase, every student can independently build and publish a complete, auto-refreshing Power BI dashboard — the exact deliverable BI Analyst roles expect from day one.

Where this shows up on the job

This is the exact workflow a working BI Analyst follows every week — connect a live data source, model the relationships, build visuals, and publish a report that refreshes itself every morning.

PHASE 6 — ADVANCED EXCEL & TABLEAU

Go beyond basic spreadsheets — master advanced Excel for reporting and Tableau for enterprise-grade analytics.

Advanced Excel

- ✅ Worksheets, workbook management & business formulas
- ✅ Data cleaning, validation & charts directly in Excel
- ✅ Macros, VBA automation & security features

Tableau

- ✅ Introduction to Tableau and its interface
- ✅ Tableau end-to-end — from data source to dashboard
- ✅ Using SQL as a data source & executive dashboard design

Excel | VBA | Tableau | Pivot Tables

What you'll be able to do after Phase 6

By the end of this phase, every student is fluent across all three major BI tools in the industry — Excel, Power BI and Tableau — ready for whichever stack an employer runs.

Where this shows up on the job

Even companies that run on Power BI often still receive data as Excel files from vendors and partners — being equally fluent in Excel and Tableau means you're never blocked waiting for someone else to reformat a file.

PHASE 7 — GENERATIVE AI FOR DATA ANALYTICS

Learn how Generative AI is transforming analytics work — from automating reports to accelerating insight generation.

GenAI Foundations

- ✅ Introduction to Generative AI & large language models
- ✅ Generative AI for text generation & machine translation
- ✅ Advanced topics in Generative AI with NLP

Applied GenAI

- ✅ Prompt Engineering fundamentals & best practices
- ✅ Using AI tools to summarise, explain & automate reporting
- ✅ Responsible & ethical use of AI in business analytics

GenAI · LLM · Prompt Engineering · NLP

What you'll be able to do after Phase 7

By the end of this phase, every student can combine traditional analytics with Generative AI — drafting insight summaries and using prompt engineering for faster, more accurate analysis.

Where this shows up on the job

Instead of spending an hour writing a dashboard summary by hand, an AI-augmented analyst drafts the first version with a well-engineered prompt in minutes — then spends the saved time on deeper analysis.

FINAL STRETCH

CAPSTONE PROJECTS & PLACEMENT PREP

Three real, hands-on data analytics builds, then turning that proof of work into offers.

Live Projects

- ✅ World Bank Data Analytics — global economic & social insights
- ✅ Bike Rental Data Analytics — demand trends & dashboarding
- ✅ Web Scraping with Python & Selenium

Career Preparation

- ✅ Resume building & LinkedIn profile optimisation
- ✅ Naukri & Indeed profile updates
- ✅ Mock interviews & Data Analyst interview prep

A complete end-to-end analytics project

Every student integrates their capstone work into one project — data collection, cleaning, SQL querying, dashboarding in Power BI/Tableau and AI-assisted reporting, all combined — the same workflow real analytics teams run in production.

FORMAT
Team-based, mentor-reviewed builds

OUTCOME
3 portfolio-ready analytics projects

TOOLS USED ACROSS THE CAPSTONE

Python · SQL · Power BI · Tableau · Selenium · Generative AI

WHERE OUR LEARNERS WORK

OUR HIRING NETWORK

Qualibytes alumni have gone on to work at leading IT services and product companies across India.

TCS	Infosys	Wipro	Accenture	Capgemini
Tech Mahindra	Deloitte	Flipkart	Genpact	DXC Technology

Why colleges & students partner with us

Placement outcomes come down to one thing above all: real project experience plus an active hiring network. Our combination of live analytics projects and a 100+ hiring network gives students a measurable edge over purely theoretical training.

WHAT OUR PLACEMENT TEAM DOES

- ✅ Matches profiles to live network openings
- ✅ Tracks applications alongside the student
- ✅ Shares direct referrals where a fit exists
- ✅ Preps for each company's interview style

Placement outcomes depend on individual performance and batch. This list reflects organisations where alumni have been placed to date, not a guarantee for any specific company.

INDUSTRIES HIRING OUR GRADUATES

IT & Software · E-commerce · Fintech · Consulting · BFSI · Retail & FMCG

WHAT YOU'LL BE ABLE TO DO

SKILLS & SALARY

- ✅ Clean, analyse & visualise data with Python (Pandas, Seaborn)
- ✅ Query & model data confidently with SQL
- ✅ Build live dashboards with Power BI & Tableau
- ✅ Use Generative AI to speed up reporting & insights

EXPECTED SALARY (INDIA, 2026)

Junior Data Analyst (0–2 yrs)	Data Analyst (2–5 yrs)	Senior Analyst / BI Dev (5–8 yrs)	Analytics Lead / Manager (8+ yrs)
₹3.5–6 LPA	₹6–12 LPA	₹12–22 LPA	₹22–35 LPA

Indicative, India market — actual offers vary by candidate, batch performance and hiring company.

Qualibytes' unique advantage

Our sister IT company, Delta 360 Services, gives advanced students real client reporting & dashboard work to practice on — a differentiator no academic institute can match.

CAREER PATHS THIS COURSE OPENS UP

Data Analyst · BI Analyst · Business Analyst · Analytics Consultant

Growth doesn't stop at Data Analyst

Most graduates move from Junior Data Analyst to Senior Analyst or BI Developer within 3–5 years, and on to Analytics Lead roles after that — the same core skills from this course compound with experience.

THE NUMBERS

OUR PLACEMENT TRACK RECORD

Numbers that matter to a career decision — not just marketing.

1000+	8 LPA	40 LPA	100%
STUDENTS PLACED	AVERAGE CTC	HIGHEST CTC	PLACEMENT SUPPORT

Cumulative Qualibytes IT Academy placement figures across all programs to date.

What "100% placement support" means

Every enrolled student receives structured placement assistance — resume building, mock interviews, and active job referrals — through to placement. It reflects the support provided, not a guaranteed job outcome for every individual.

HOW WE TRACK OUTCOMES

Every placement, logged

Our counseling team tracks every student from offer letter to joining date, across every program and batch.

Want the course-wise breakdown?

We're happy to share course-wise placement data during a campus or admissions session.

"Within 4 months of finishing the course, I secured my first role as a Junior Data Analyst at a leading fintech company."

Abhinav Singh
BCA Student

"The real-world datasets helped me build a strong portfolio — recruiters noticed it immediately in interviews."

Priyanka Sharma
B.Tech Student

PRACTICE ON REAL, FREE ANALYTICS TOOLS

This course is built around the same free-tier tools working analysts use in the real world — at no personal cost to you.

Google Colab & Jupyter
Free cloud notebooks with no setup — run Python, Pandas and visualisation libraries directly in the browser.

Power BI Desktop (Free)
Microsoft's full desktop BI tool is free to build and publish dashboards for learning and personal projects.

Tableau Public, MySQL & GitHub
Tableau Public lets you build and share dashboards for free; MySQL Community Edition and GitHub give you a real database and version control at no cost.

WHERE YOU'LL USE THIS IN THE COURSE

- ✅ Phase 5: publishing live Power BI dashboards
- ✅ Phase 3: visualising datasets in Python
- ✅ Phase 6: building Tableau Public dashboards
- ✅ Your 3 live capstone projects

Good to know
Free-tier limits and terms are set by each provider and can change at any time — always confirm current details on the provider's own site before relying on them.

No paid software required
Every single tool taught in this course has a genuinely free way to learn and practice on it — so cost is never a barrier to getting hands-on, whether you're on a personal laptop or a shared family computer.

IS THIS FOR YOU

WHO SHOULD JOIN

- ✅ Aspiring analysts starting a career in data analytics
- ✅ Career changers moving into the high-demand analytics field
- ✅ IT & engineering graduates seeking job-ready skills
- ✅ Business professionals wanting data-driven decision-making
- ✅ Freelancers & consultants offering data analysis as a service
- ✅ Upskilling professionals from marketing, finance or operations

QUALIBYTES PLACEMENT ROADMAP

STEP 1
5 months of live industrial training by working professionals

STEP 2
Hands-on work on Delta 360's live major projects

STEP 3
Mock interviews & interview question prep

STEP 4
Resume, Naukri & Indeed profile updates, job references

No prior experience? No problem

The course starts from fundamentals — no prior coding or technical background is required. Students are guided from zero to job-ready through structured, mentor-led phases, with real analytics projects layered in as skills build.

Learn at your own pace

Live sessions are recorded and available 24/7, so working professionals and students alike can revisit any topic without falling behind the batch.

Managing Director

- ✅ Industry-recognised credentials
- ✅ Backed by 3 live analytics projects, not just attendance
- ✅ Makes your resume stand out among recruiters
- ✅ Guided by experienced analytics & BI mentors

> *"Excellent course structure, hands-on projects, and real datasets. Gained real confidence working with Power BI and SQL."*
>
> **Priyanka Sharma**
> B.Tech Student

> *"Clear explanations and strong mentorship — a smooth transition from marketing into data-driven decision-making."*
>
> **Sandeep Kumar**
> MBA Student

> *"Comprehensive curriculum and supportive trainers helped me land my first Data Analyst role within 4 months."*
>
> **Abhinav Singh**
> BCA Student

A credential that means something

Your certificate is signed off only after your capstone projects are reviewed by a mentor — so it tells a recruiter you can actually do the work, not just that you sat through the sessions.
