BY THE NUMBERS

TOTAL DURATION	TOTAL PHASES	LIVE PROJECTS	TECHNOLOGIES
4 Months	4	2	15+

COURSE ROADMAP — ONE PHASE PER MONTH

1. **Foundations — Python & the LLM Landscape** — Month 1
   Python for AI, LLM APIs (OpenAI, Claude, Gemini), prompt engineering basics
2. **Generative AI Core** — Month 2
   Transformers, advanced prompting, RAG, vector databases, fine-tuning basics
3. **Agentic AI Engineering** — Month 3
   LangChain, LangGraph, CrewAI/AutoGen, multi-agent orchestration, tool use & memory
4. **Cloud Deployment, LLMOps & Capstone** — Month 4
   AWS Bedrock/SageMaker, Docker, evaluation & guardrails, capstone + placement prep

How each phase builds on the last

Month 1 gives you Python and the working vocabulary of LLMs; Month 2 grounds those models in real data with RAG; Month 3 turns single responses into agents that plan, use tools and remember context; and Month 4 deploys everything on real cloud infrastructure. By the capstone, every earlier skill comes together in one deployed system.

Why this curriculum works in 2026

Plain prompting is table stakes now. Employers are hiring for AI agents that can reason, use tools and complete multi-step tasks — this course goes straight to that skill, not around it.

MONTH 1 — FOUNDATIONS & THE LLM LANDSCAPE

Where every AI Engineer starts: solid Python, and a working understanding of how today's LLMs actually behave.

Python & Tooling

- ✅ Python for AI: data structures, functions & working with APIs
- ✅ Git & GitHub version control workflows
- ✅ Prompt engineering fundamentals

The LLM Landscape

- ✅ How LLMs work: training, inference & model families
- ✅ Working with OpenAI, Claude & Gemini APIs
- ✅ Choosing the right model for cost, latency & task

Python · Git · OpenAI API · Claude API · Gemini API

What you'll be able to do after Month 1

By the end of this month, every student can call production LLM APIs confidently, write prompts that produce reliable output, and reason about which model fits which task — the baseline every later month builds on.

Where this shows up on the job

Every AI feature a company ships starts with an API call, a well-built prompt and a sensible model choice. This month is where you learn to make all three decisions deliberately instead of by trial and error.

MONTH 2 — GENERATIVE AI CORE

Moving past single prompts into applications that ground LLM responses in real data.

Generative AI Foundations

- ✅ Transformer architecture, explained practically
- ✅ Advanced prompting: few-shot, chain-of-thought & structured output
- ✅ Fine-tuning open-source & foundation models

RAG & Vector Databases

- ✅ Retrieval-Augmented Generation (RAG) pipelines
- ✅ Vector databases: Pinecone, FAISS & ChromaDB
- ✅ Project 1: RAG-powered knowledge assistant

RAG · Vector DBs · Pinecone · FAISS · Fine-tuning

What you'll be able to do after Month 2

By the end of this month, every student has shipped a working RAG application — grounding an LLM in real data instead of relying on it to "just know" the answer. Project 1 is delivered at month end.

Where this shows up on the job

Project 1 is a RAG-powered knowledge assistant: upload, chunk, embed, retrieve and generate — the exact pattern companies use for internal help-desk bots and document Q&A, and the foundation your Month 4 capstone extends.

MONTH 3 — AGENTIC AI ENGINEERING

The core of this program: moving from single-response GenAI to AI agents that reason, use tools and complete multi-step tasks autonomously.

Building Agents

- ✅ AI agent architecture: the observe → think → act loop
- ✅ Agents with LangChain & function / tool calling
- ✅ Stateful, graph-based agent workflows with LangGraph

Multi-Agent Systems & Safety

- ✅ Multi-agent orchestration with CrewAI & AutoGen
- ✅ Agent memory & tool use: web search, code execution, custom APIs
- ✅ Guardrails, evaluation & failure-mode handling for agents

LangChain · LangGraph · CrewAI · AutoGen · Function Calling

What you'll be able to do after Month 3

By the end of this month, every student can design agents that plan multi-step tasks, call external tools on their own, remember context across a conversation and recover gracefully when a step fails.

Where this shows up on the job

Most short GenAI courses stop at prompting. A production-grade agent needs state management, reliable tool-calling and failure handling — that depth is what separates a demo from an AI system a business can rely on.

MONTH 4 — CLOUD DEPLOYMENT & LLMOPS

Deploy for real — the skills that separate a demo from a production AI system.

Cloud Deployment

- ✅ AWS Bedrock & SageMaker for hosting foundation models
- ✅ Containerizing AI apps with Docker
- ✅ Serving agents & RAG apps via Streamlit / Flask

LLMOps

- ✅ Monitoring, logging & cost management
- ✅ Evaluation & guardrails for production AI systems
- ✅ CI/CD basics for shipping AI application updates

AWS Bedrock | SageMaker | Docker | Streamlit | LLMOps

What you'll be able to do after Month 4

By the end of this month, the capstone app is live-deployed — every agent and RAG app you've built is deployed the way real engineering teams ship AI, on real cloud infrastructure. Placement preparation follows.

Where this shows up on the job

A model running only in a notebook on your laptop isn't a product. Deployment, monitoring and cost control are what hiring managers probe for when they ask whether you have shipped anything real.

FINAL STRETCH

CAPSTONE PROJECTS & PLACEMENT PREP

Two real, deployed AI builds, then turning that proof of work into offers.

Live Projects

- ✅ Project 1 — RAG-powered knowledge assistant (Month 2)
- ✅ Project 2 — Multi-agent capstone application: LangGraph + CrewAI + AWS Bedrock, deployed live

Career Preparation

- ✅ Technical resume writing for GenAI / Agentic AI roles
- ✅ GitHub & LinkedIn portfolio optimisation
- ✅ Mock technical interviews & GenAI / agent system design

Make it your portfolio piece

The capstone extends your Month 2 RAG assistant into a deployed, agentic workflow — multiple AI agents collaborating with tools, memory and orchestration. Each student then customises it into their own use case, deploys it live and adds it to a professional portfolio — their primary job-seeking asset.

FORMAT
Team-based, mentor-reviewed builds

OUTCOME
2 deployed, portfolio-ready AI projects

TOOLS USED ACROSS THE CAPSTONE

Python · LangGraph · CrewAI · AWS Bedrock · Vector DBs · Docker · Streamlit

WHERE OUR LEARNERS WORK

OUR HIRING NETWORK

Qualibytes alumni have gone on to work at leading IT services and product companies across India.

TCS	Infosys	Wipro	Accenture	Capgemini
Tech Mahindra	Deloitte	Flipkart	Genpact	DXC Technology

Why colleges & students partner with us

Placement outcomes come down to one thing above all: real project experience plus an active hiring network. Our combination of live agentic-AI projects and a 100+ hiring network gives students a measurable edge over purely theoretical training.

WHAT OUR PLACEMENT TEAM DOES

- ✅ Matches profiles to live network openings
- ✅ Shares direct referrals where a fit exists
- ✅ Tracks applications on Naukri & Indeed alongside the student
- ✅ Preps for each company's interview style

Placement outcomes depend on individual performance, course and batch. This list reflects organisations where alumni have been placed to date, not a guarantee for any specific company.

INDUSTRIES HIRING OUR GRADUATES

IT & Software · E-commerce · Fintech · Consulting · BFSI · Retail & FMCG

SKILLS & SALARY

- ✅ Design GenAI applications with RAG & vector databases
- ✅ Build autonomous AI agents with LangChain & LangGraph
- ✅ Prompt-engineer & fine-tune LLMs reliably
- ✅ Orchestrate multi-agent systems with CrewAI & AutoGen
- ✅ Deploy AI agents & RAG apps on AWS Bedrock / SageMaker
- ✅ Walk into interviews with 2 live, deployed projects

EXPECTED SALARY (INDIA, 2026)

Fresher with internship (0–1 yr)	Working Dev + Agentic AI Skills (1–3 yrs)	Senior Agentic AI Engineer (3+ yrs)
₹8–13 LPA	₹16–24 LPA	₹28–42 LPA

Indicative, India market, based on current industry benchmarks for Agentic AI roles — actual offers vary by candidate, batch performance and hiring company.

Qualibytes' unique advantage

Our sister IT company, Delta 360 Services, gives advanced students real client work to practice on — not toy examples. That live-project experience is a major differentiator in interviews that no purely academic institute can match.

CAREER PATHS THIS COURSE OPENS UP

- Agentic AI Engineer
- GenAI Engineer
- AI Application Developer
- Prompt Engineer
- LLM / RAG Engineer
- AI Automation Engineer

THE NUMBERS

OUR PLACEMENT TRACK RECORD

Numbers that matter to a career decision — not just marketing.

1000+	8 LPA	40 LPA	100%
STUDENTS PLACED	AVERAGE CTC	HIGHEST CTC	PLACEMENT SUPPORT

Cumulative Qualibytes IT Academy placement figures across all programs to date.

What "100% placement support" means

Every enrolled student receives structured placement assistance — resume building, mock interviews, and active job referrals — through to placement. It reflects the support provided, not a guaranteed job outcome for every individual.

Why this track record matters for a brand-new course

These figures are institute-wide, across all Qualibytes programs to date. Gen AI & Agentic AI Engineering is newly launched and inherits the same mentors, the same Delta 360 live-project pipeline, and the same placement team behind those numbers.

HOW WE TRACK OUTCOMES

Every placement, logged

Our counseling team tracks every student from offer letter to joining date, across every program and batch.

Want the course-wise breakdown?

We're happy to share course-wise placement data and recent offer letters during a campus or admissions session.

TRAIN ON REAL AWS CLOUD — FREE

This course is built around AWS's AI stack (Bedrock & SageMaker), and AWS itself offers free credits that let you practice on real infrastructure while you learn — at no personal cost.

AWS Free Tier

New accounts get $100 in credits immediately, up to $200 total within 6 months — plus 30+ Always-Free services. No application needed.

AWS Educate

Free, self-paced cloud and AI training from AWS — a solid companion track alongside your Qualibytes coursework.

HOW TO USE YOUR CREDITS EFFECTIVELY

- ✅ **Check your balance in the AWS Billing Console**
- ✅ **Set AWS Budget alerts at 50%, 75% & 90%**
- ✅ **Use Free Tier allowances first, before credits**
- ✅ **Prioritise credits for Month 4 & capstone work**

Good to know

Credit amounts and eligible services are set by AWS and can change at any time. This page is guidance from Qualibytes, not an official AWS publication — confirm current details at aws.amazon.com/free. “AWS” and the AWS logo are trademarks of Amazon.com, Inc.

Where you'll use this in the course

Month 4 deployment labs on Bedrock & SageMaker, containerised hosting of your agents and RAG apps, and your live capstone deployment — all practised on real cloud infrastructure rather than a simulator.

IS THIS FOR YOU

WHO SHOULD JOIN

- ✅ Complete beginners with zero coding background
- ✅ College students & fresh graduates seeking AI-ready skills
- ✅ Software developers moving into AI/ML roles
- ✅ Working professionals upskilling for the GenAI era
- ✅ Data analysts wanting to move into machine learning
- ✅ Anyone wanting to combine coding with AI fluency

QUALIBYTES PLACEMENT ROADMAP

STEP 1
4 months of live training by working AI professionals

STEP 2
Hands-on work on Delta 360's live AI projects

STEP 3
Mock interviews & interview question prep

STEP 4
Resume, profile updates & job references

No prior experience? No problem

The course starts from fundamentals — no prior coding or technical background is required. Students are guided from zero to job-ready through structured, mentor-led months, with live projects layered in as skills build.

Getting started is simple

Talk to a Qualibytes counselor about your goals & timeline, choose the learning track that fits your schedule, begin live training with an assigned mentor, and move into placement support as your skills build. Starting level: beginner-friendly.

EARN YOUR CERTIFICATE

- ✅ **Industry-recognised credentials**
- ✅ **Backed by 2 deployed AI projects, not just attendance**
- ✅ **Dedicated live sessions by industry experts**
- ✅ **Makes your resume stand out among recruiters**
- ✅ **Hands-on, project-based learning throughout**
- ✅ **Guided by experienced AI/ML mentors**

> ***"The AI tools module alone was worth the whole course — I learned to code and debug faster using Copilot and Claude."***
>
> **Priyanka Sharma**
> B.Tech Student · alumna of another Qualibytes program

A credential that means something

Your certificate is signed off only after your capstone projects are reviewed by a mentor — so it tells a recruiter you can actually do the work, not just that you sat through the sessions. As this is a newly launched course, alumni-specific outcomes will be shared once our first cohort graduates.

Verified on LinkedIn | **Shareable Digital Copy** | **Lifetime Validity**

REAL STUDENTS, REAL RESULTS

SUCCESS STORIES

Qualibytes alumni who turned structured, mentor-led training into measurable career growth.

Riya Pandey
Data Analyst · Delhi

★★★★★

"The data projects and case studies helped me transition smoothly into analytics roles."

Career Growth +160%

Mohd. Shadab
Frontend Engineer · Chennai

★★★★★

"Hands-on React and performance optimization training gave me a strong edge in interviews."

Career Growth +210%

Abhishek Rai
Software Engineer III · Hyderabad

★★★★★

"The structured roadmap and mentorship helped me confidently crack product-based interviews."

Career Growth +250%

Soumya Ranjan
Backend Developer · Pune

★★★★★

"The backend and mentorship sessions helped me scale my skills fast."

Career Growth +138%

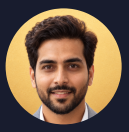

Shubham
Full Stack Developer · Noida

★★★★★

"Live coding sessions and debugging exercises improved my confidence in technical rounds."

Career Growth +180%

Diwakar Singh
Software Engineer · Bangalore

★★★★★

"Mock interviews and real-world project reviews completely changed my preparation strategy."

Career Growth +300%

STUDENTS PLACED	AVG. CAREER GROWTH	AVERAGE RATING
1000+	+200%	5.0 / 5

Outcomes, not just attendance

Every story above is a real Qualibytes alumnus who went through the same mentor-led, project-driven training you're evaluating — from first-time job seekers to professionals switching domains into high-demand tech roles.

Verified Alumni · Real Career Outcomes · Mentor-Led Training · Project-Backed Growth
